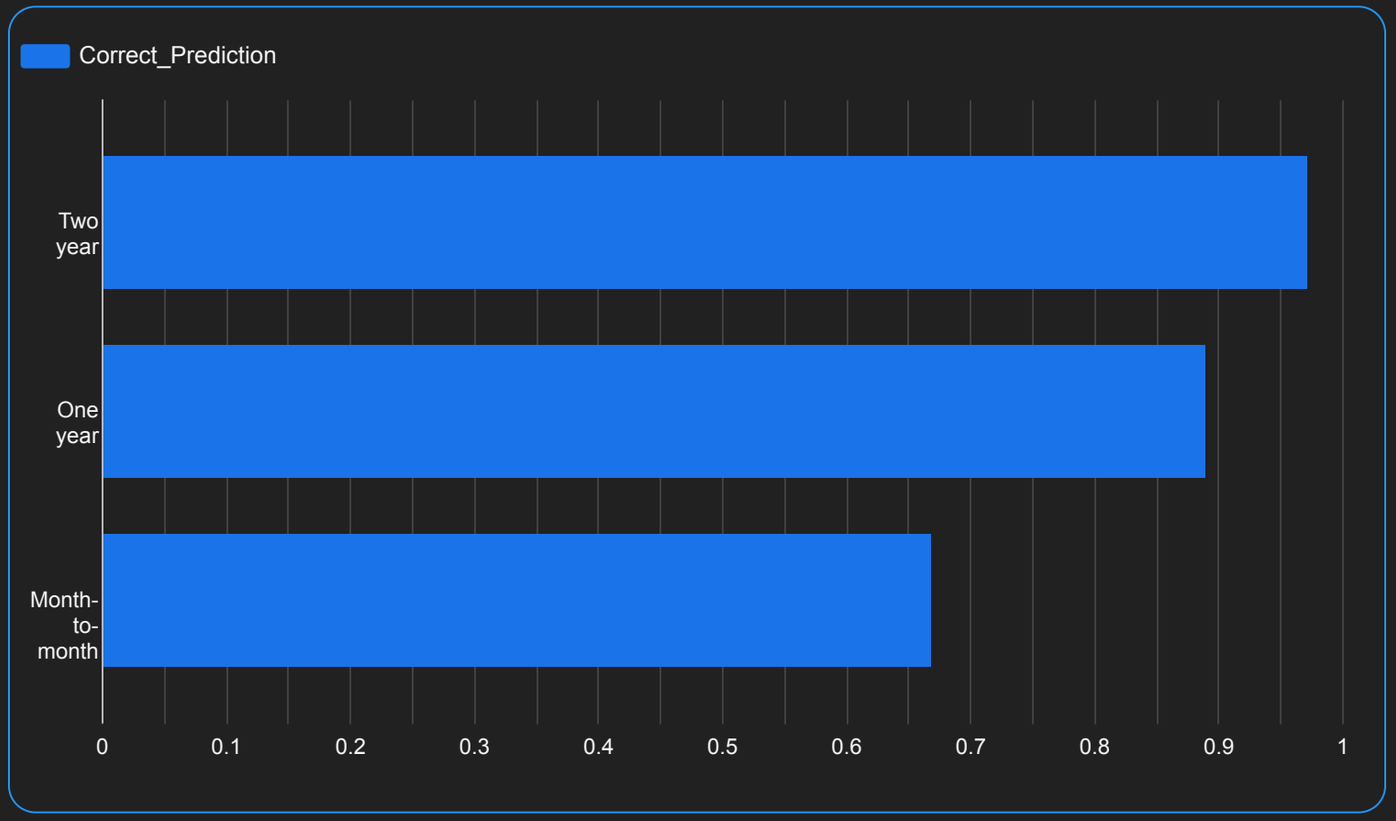
Prediction Accuracy by Segment



Executive Summary: We are currently seeing a 26.54% churn rate , placing $456.12K in monthly revenue at risk. To stabilize growth, we must address the 1,996 high-risk customers through the following interventions:

CRITICAL

Contract Migration (High Priority): Month-to-month subscribers have a churn probability of 0.6.

We should offer a $5/month discount for 12 months to any customer who upgrades to a "One-year" or "Two-year" contract .

STRATEGIC

Payment Method Transition: Electronic Check users churn at a rate of 0.45, compared to just 0.15 for Credit Card (Auto-pay) users.

Launch a campaign to move manual payers to automated billing via a one-time "Auto-pay" credit.

HIGH PRIORITY

Precision Outreach: The model has identified 1,996 High Risk individuals with a churn probability often exceeding 90%.

These IDs (e.g., 8149-RSOUN) should be routed to the VIP Retention Team immediately for proactive "Wellness Calls".

STRATEGIC

Service Reliability Audit: Fiber Optic customers represent 44% of our churned population.

We recommend a technical audit of Fiber infrastructure in high-churn zip codes to ensure service quality matches premium pricing.
